

## Retrofit Spraybooth LED Lighting Systems

AGM manufacture LED light fittings to suit any make or model of spraybooth and paint mixing room.

### Why our customers like LED lighting...

LED lighting increases the LUX level in an existing spraybooth from the same number of light fittings. AGM's replacement lighting systems are designed to output between 1,000 LUX and 1,500 LUX depending on customers specific requirements. Improved lighting levels will help to deliver a quality job.

LED lighting maintains lighting levels satisfying Motor Manufacturer approvals.

The reduction in operating costs include energy savings with like for like lumens output, time and material costs changing fluorescent tubes, and significantly longer life of the light fitting as a whole.

- ✓ Over 60% cost saving compared to equivalent fluorescent lighting
- ✓ Significant increase in LUX level from the same number of light fittings
- ✓ Lower lumen depreciation over time so no costly tube changes required
- ✓ Crisp and clear illumination
- ✓ 5 year guarantee
- ✓ 60,000 hours measured to LM-80
- ✓ Expected life span is over 10 years

*"As part of our manufacturers approval for Mercedes Benz we were required to improve the lighting in one of our spraybooths. We opted for AGM's tailored LED lighting solution in order to ensure consistent LUX levels for the life of the equipment. Paul the engineer who fitted them took readings before and after the installation - the LUX values had almost trebled."*

*Dave Cottrell, Managing Director, KC Autos*
